

THE CITY OF
SAN DIEGO

Wenrich Drive Storm Drain Repair Project

Project Background

The existing storm drain built in 1967 is nearing the end of its service life. Construction of the project will improve service reliability, upgrade the system to modern standards, accommodate community growth, and reduce maintenance requirements.

Project Overview

The project will remove the existing 36-inch corrugated metal pipe (CMP) and replace it with a 36-inch reinforced concrete pipe (RCP).

Work will be done along the length of Wenrich Drive, the intersection of Wenrich Drive and Lance Street, and within the existing drainage easement leading to the outfall at Navajo Canyon Open Space Park.

There should be minimal to no impacts to residents in the area. During construction on Wenrich Drive, a small portion of the street may be closed or traffic control may be needed, but access to all residences will be possible by alternative routes.

Construction Schedule

Construction Start: November 2010
Construction Finish: March 2011

Cost

The construction estimate is for \$213,150.

- Airports
- Bikeways
- Bridges
- Drainage Control & Flood Control Facilities
- Libraries
- Park & Recreation Centers
- Police, Fire & Lifeguard Stations
- Street Improvements
- Street Lights & Traffic Signals
- Utilities Undergrounding
- Water & Sewer Facilities
- Water & Sewer Pipelines
